FORMATION OF PSYCHOLOGY AND PEDAGOGY AS INTERDISCIPLINARY SCIENCES: a collection scientific works of the International scientific conference (13 May 2025). Part 40 – 494 p.

Chief editor: Candra zonyfar- PhD Universitas Buana Perjuangan Karawang, Indonesia
Sunmoon University, South Korea.

Editorial board:

Tone Roald, PhD Associate Professor of Psychology University of Copenhagen

Elin Eriksen Ødegaard, Professor, Western Norway University of Applied Sciences

Mariane Hedegaard, Professor Emerita, Copenhagen University, Denmark

Magnus Englander, PhD Associate Professor of Psychology Malmö University, Sweden

Paul Sullivan, PhD University of Bradford Bradford, United Kingdom

Mathias TraczykSøren, PhD

Thiesen Amanda, PhD

Nybroe Rohde, PhD

Languages of publication: Italy, dansk, English, русский, беларуская, limba română, uzbek,

The compilation consists of scientific researches of scientists, post-graduate students and students who participated International Scientific Conference " **FORMATION OF PSYCHOLOGY AND PEDAGOGY AS INTERDISCIPLINARY SCIENCES** ".

Gli atti della conferenza sono raccomandati per scienziati e insegnanti negli istituti di istruzione superiore. Possono essere utilizzati nell'istruzione, compreso il processo di insegnamento post-laurea, la preparazione per l'ottenimento di diplomi di laurea e master. La revisione di tutti gli articoli è stata effettuata da esperti, i materiali sono protetti dal diritto d'autore degli autori. Gli autori sono responsabili dei contenuti, dei risultati delle ricerche e degli errori.

THE ROLE OF ANTHROPOLOGICAL FACIAL PARAMETERS IN DESIGNING A PROSTHESIS

Tursunaliev Ziloliddin

Assistant of the department of therapeutic and surgical dentistry CAMU

Restoration of the anthropological parameters of the face can be achieved with anatomically correctly designed prostheses, where the upper dental arch is formed taking into account the prosthetic plane and overlaps the lower dental arch, and the midline between the upper central incisors coincides with the midline between the lower central incisors.

In a relaxed state of the upper lip, the upper central incisors are positioned 1 mm below it. With a broad smile, the teeth look natural. Such a clinical and anthropological approach creates a comfortable psycho-emotional state for the patient, and the smile appears attractive.

In the clinic, it is possible to fabricate anatomically correct orthopedic prostheses by observing all the rules listed below: taking free-anatomical impressions with a dense impression material to create individual trays; fabricating individual trays from heat-cured acrylic baseplate material (on the upper jaw – over the second layer of wax, on the lower jaw – over the first layer of wax, and only with a mobile alveolar ridge – over the second layer of wax); fitting individual trays using Herbst's tests; border molding the edges of individual trays (upper – along the posterior border, lower – in the sublingual space, with complete atrophy – additionally along the entire border); taking functional-suction impressions with the selection of impression material according to the condition of the alveolar processes and mucous membrane, using Herbst's tests; boxing the functional-suction impressions on the outer surface, receding 2–3 mm from the border before pouring plaster models; fabricating the bases of future prostheses from heat-cured plastic (on the upper base with an incisal stop 17 mm wide); forming the prosthetic plane with a Larin apparatus; determining the interalveolar height using the anatomical and physiological method; establishing the mandible in centric occlusion using functional tests. Tooth setting should be performed using the average anatomical method; forming the outer surfaces of the bases at the stage of checking the design of the prostheses; correcting multiple tooth contacts during mandibular movements at the fitting stage of complete removable dentures.

The existing connection between the anthropological parameters of the face and intraoral parameters allows for the construction of complete removable dentures with the restoration of individual anatomical and functional features,

which, in turn, restores the aesthetics of the external facial appearance, chewing and speech functions, improves the psycho-emotional state, and creates social and professional comfort.

Effective orthopedic treatment of patients with complete edentulism is possible only when individual anthropological parameters are taken into account, allowing for facial reconstruction through adequate construction of complete removable dentures.

The scientific and practical works of anthropologists and dentists have a close interrelationship. Anthropologists use teeth to reconstruct the soft tissues of the face, and prosthodontists use anthropological parameters of the face to construct dental prostheses, in particular complete removable dentures for patients with complete edentulism.
